AMAD EXPRESS 86

Comments and Requirements for the Proposed Accounting System

1. Passenger Registration and Details

- Provide a simple passenger registration form accessible through either:
    - A QR code displayed inside the vehicle for passengers to scan and complete the form.
    - A registration link that can be shared directly with passengers.
- The submitted information should automatically be saved in the software.
- Required passenger details:
    - Passenger Name
    - Company Name
    - Mobile Number (The system must not allow duplicate mobile numbers. Each passenger must register using a unique UAE mobile number, and the system should display an error message if the number is already registered.)
    - Pick-up Point (dropdown options: Deira, Bur Dubai, Burjuman, Karama, and Satwa)
    - Company Location (dropdown options: Al Quoz 1, Al Quoz 2, Al Quoz 3, Al Quoz 4, and Umm Suqeim)
- After successful registration, display a notification advising passengers to contact Mr. **Amad at 052-2323-644** to arrange their agreement contract for RTA checking purposes. Passengers must submit a **copy of their Emirates ID (front and back)** or, for newly joined employees, their **offer letter**. Passengers who already have an agreement contract may disregard this notification.

2. Monthly Payment Tracking

- The system should focus mainly on tracking payments collected and outstanding dues.
- Payments are recorded monthly, with the following details:
    - Passenger Name
    - Amount Paid
    - Month Covered by the Payment
- Each passenger should have an individual Statement of Account (SOA) showing which months are paid and which months remain pending.
- Include a **search function** when recording payments, allowing us to quickly find a passenger by name or company name.

3. General System Requirements

- The system should be simple, user-friendly, and easy to manage.
- The main priority is to monitor monthly collections, outstanding balances, and each passenger's payment history without unnecessary complexity.
